# **Module: Web Programming 281**

| Module name:    | Web Programming 281                        |  |  |  |
|-----------------|--|--|--|--|
| Code:           | WPR281                                     |  |  |  |
| NQF level:      | 6  |  |  |  |
| Type:           | Core – Bachelor of Computing (all streams) |  |  |  |
| Contact time:   | 48 hours                                   |  |  |  |
| Structured time | 8 hours                                    |  |  |  |
| Self-directed   | 64 hours                                   |  |  |  |
| Notional hours: | 120 hours                                  |  |  |  |
| Credits:        | 12   |  |  |  |
| Prerequisites:  | WPR181, PRG181                             |  |  |  |

### **Purpose**

The purpose of the course is to introduce interactive and dynamic web design by incorporating a programming language into a web page. The course covers language-specific details that need to be implemented in-order to achieve the desired results. It will also look at how data should be represented for it to be best transmitted between the client and server.

### **Outcomes**

Upon successful completion of this module, the student will be able to:

- Demonstrate detailed knowledge of the main areas of dynamic website programming, including an understanding of and the ability to apply the principles of programming to the area of web development.
- Evaluate, select and apply appropriate website development techniques in particular to analyse and model requirements and constraints for the purpose of designing and implementing a dynamic website that is compatible with a range of different channels.
- Identify, analyse and solve problems by creating dynamic websites that accommodate specified requirements and constraints, based on analysis or modelling or requirements specification.
- Communicate effectively with a variety of audiences through a range of modes and media, in particular to present a clear, coherent and independent exposition of functional websites to IT and/or non-IT personnel via reports or presentations.

#### **Assessment**

Assessment is performed using a variety of instruments:

- Continuous evaluation of theoretical work through one written assignment, one project, two formative assessments, and a summative test.
- Continuous evaluation of classwork, whereby the student must create and deploy a solution according to specifications.
- Final assessment through a written examination.

- The assignments or projects collectively will count 30% of your class mark.
- All tests will collectively account for 70% of your class mark.
- Your class mark contributes 30% towards your final mark for the subject, while the final assessment accounts for 70% of your final mark.

# **Teaching and Learning**

## **Learning materials**

### Prescribed books (EBSCO)

- Mantyla, D. (2015) Functional Programming in JavaScript. Birmingham, UK: Packt Publishing (Community Experience Distilled).
- Danny Goodman et al. (2010) JavaScript Bible. Hoboken, N.J.: Wiley.

### **Learning activities**

The teaching is a combination of the presentation of practical and theoretical concepts, and exercises and discussions. It is practice-oriented, with two mandatory assignments which must be completed during the course.

# **Notional learning hours**

| Activity           | Units | <b>Contact Time</b> | Structured Time | Self-Directed Time |
|--------------------|-------|---------------------|-----------------|--------------------|
| Lecture            |       | 40.0                |                 | 28.0               |
| Formative feedback |       | 5.0                 |                 |                    |
| Project            | 1     | 3.0                 |                 | 9.0                |
| Assignment         | 1     |                     |                 | 3.0                |
| Test               | 3     |                     | 6.0             | 11.0               |
| Exam               | 1     |                     | 2.0             | 13.0               |
|                    |       |                     |                 |                    |
|                    | _     | 48.0                | 8.0             | 64.0               |

## **Syllabus**

- Fundamentals of web programming including the use of variables, decision constructs and looping structures.
- Object representation of data.
- Creating dynamic websites through the application of functional programming in web development.
- Introduction to asynchronous web programming in JavaScript.
- Using libraries to extend web applications that include jQuery.
